

How to install a LMR400 Grounding kit:

Step 1:

First you will need to strip away about 40mm of the outer plastic. Do not cut the cable too deep. See the picture below:

Step 2:

Clamp the grounding kit on the section of cable that was stripped away. Please make sure that the metal sections are sealed properly.

Step 3:

Tighten the screws on the grounding kit and connect the grounding wire to an earth.
